

Wiring Diagram for EL5120 Power switch

1. Remove wires from existing power switch (Black power cord wire, Motor wire #3, Small gauge hookup wire)
2. Push the switch out of the panel (use a flat-head screwdriver to push in the catches on the sides of the switch)
3. Insert the new switch into the panel, as shown in the diagram below. (Off will be to the left side)
4. Re-connect the Red and two black wires as shown in the diagram.
